Manchester, N.H., 29 March 1844.

My Dear Grand— I wonder to learn whether
the task of living plants came to you in good
order & whether they are doing well—
I have sent you a parcel containing speci-
mens of dried plants & a few seeds for
your Botanic Garden— With your package
I have taken the liberty to forward a parcel
for E. Tuckerman Esq. of Boston and a lot for
Prof. Kunze of Leipzig which I hope you will
forward without delay for the box contains be-
sides Specimens of dried Plants some seeds
for the Botanic Gardens of Leipzig which ought
to have been in the way before now—

For the trouble of forwarding the box & the expense of transportation to Boston you
will please charge me & I will pay it in any
way you may order — The lot & box
were sent to the Care of Wiley & Putnam N.Y.

Could you get some young botanists to work to
obtain for one set of some of the following seeds
of Eucalyptus & Eucalyptus Linn. E. bicicata, Eucalyptus lczetilis,
E. caesia, Eucalyptus, E. bicicata, Eucalyptus bicicata, Eucalyptus bicicata,

E. bicicata, Eucalyptus bicicata, Eucalyptus bicicata,
What do you make of my new species of Rhynchospora? I do not hear that it has come out yet to take its place among the species of that interesting genus. Please to let me know something about it in due time! I have sent my Grapes & Cyperaceous plants in sets but have not yet enough for a continuation of the Grapes Block. There are however several species which I have in views & which may be obtained with little trouble & expense. There are also sorts of Torre the greater portion of the species published in the 1st & 2d parts of your Grapes Block. Are there any grapes about Boston that could be obtained in exchange for such as could be forwarded.

Shall I send you some living plants this Spring? & if you say yes what shall I send you? I hope to make numerous collections this season & am now fully prepared with rooms to look after them night & day. I only lack a greenhouse to air Plant Baker for drying of flowers & plants.

I am also better prepared for living more familiar with the plants that grow in this region & with the localities where many interesting species may be found without spending time in search after them.

Believe me truly yours P. P. Sims.
